

# Assembly Operative (Entry-Level / School Leaver Opportunity)

---

## About Us

Rapiscan Systems, part of OSI Systems, designs and manufactures advanced security and inspection systems used worldwide. Our technology helps keep people safe in locations such as airports, border crossings, seaports, railway stations, and government facilities.

## The Role

We are looking for motivated individuals to join our Assembly Flow Line team, where you will learn to build electro-mechanical products in a structured production environment. This role is ideal for school leavers or those with little to no previous experience, as full training will be provided.

You will work as part of a team, following clear instructions to complete various stages of the assembly process, including preparation, assembly, inspection, and packaging.

## Key Responsibilities

- Assemble products as part of a production line following step-by-step instructions
- Use small hand tools such as screwdrivers and cutters safely
- Prepare materials and kits for assembly
- Carry out basic quality checks during the process
- Follow production plans to meet daily targets
- Support packaging of finished products
- Report any issues or defects to your supervisor
- Work as part of a team to ensure smooth production flow
- Suggest improvements to help increase efficiency

## What We're Looking For

- A positive attitude and willingness to learn
- Good attention to detail
- Ability to follow instructions carefully
- Comfortable working in a team
- Interest in hands-on, practical work
- Flexibility to adapt to changing priorities

### **Desirable (Not Essential)**

- Interest in engineering or manufacturing
- Basic experience using tools (e.g. DIY or school projects)
- Basic IT skills

### **Our Expectations**

- Follow company processes and safety standards
- Report any quality concerns
- Act in line with the company's Code of Ethics
- Uphold core values: Integrity, Innovation, Accountability, and Teamwork

### **Additional Information**

Full training will be provided. Duties may be adjusted based on business needs. This role is a great starting point for a career in manufacturing or engineering.
